Keywords: Extranet Implementation

Abstract:
Extranet is in fact an implementation of internetworking technology to provide interoperability throughout the ranks of the organization. In other words extranet is an Internet with an Internet connection has been modified so that it can be accessed by persons outside of the various layers.
The fourth chapter provides an introduction to the concepts underlying the extranet, provides an introduction to the extranet. Explaining the difference extranet with the kinds of other internetworking, and discusses the physical and logical architecture in which the extranet is built. Supported by the implementation of extranet in the real world. Such as improving networking functions with other extranet.
