Abstract:
Based on research from the running system, causing adverse effects or problems that can hamper KSM data processing, so it needs to implement a system that is proposed to solve the problem. Information about KSM issued become more effective and efficient and accurate data can be guaranteed. Speed the process of making reports, the ease of doing the changes to the files of SHGs, so that the utilization of hardware and software limitations and ensure computer security device that is used for data processing in the future and can support the decision-making.
