Abstract:
In this paper the authors take the title "Application of Administrative Services Support Program Library STMIK Jakarta STI & K By using Microsoft Visual Basic 6.0." Library is the place to get information by reading and conducting research or to say where the source of knowledge, but in its development, management feels less utilization of the library who need them.

In general, the library in Indonesia is still using a technology that can not be relied upon, or it can be said is still very manual, so very difficult for the administration of the library database. Whereas we know that the library is one of the information window that can open and develop insights into thinking that a national society can contribute to the intellectual life of the nation.

Where in this case is a discourse for the writer to develop a library function that is distributed faster and reliable in terms of delivery and administration easier in terms of library databases.

For that it would the good if the application has been running or not, always looking for the right solution so that the function library we can really feel.
