Abstract:
Information technology has become a part share of economic activity and business. This technology is believed to bring positive impact to the start of the reason for efficient use of time and accuracy of data. So, no wonder if all the competing economic activities using information technology as a means penigkatan satisfaction of the needs. No exception to the revenue administration is the business sector in trade (from UD) Molen emerging Jaya. Along with the need to further simplify the data processing in data processing machines for the administration of lease rentals, we need a data processing system to replace the system of computerized data processing is done manually. Hence made the processing and administration system using a machine rental program new applications for data collection engine leasing process easier in data processing and information needs of customers, machines and rentals can be achieved easily and accurately.
The author hopes that with the existence of administrative data management system rental machine that writers make, hopefully it will be useful for the needy.
