Abstract:
In this scientific writing about the timetable set forth reminders of time of five time obligatory prayers that are around the cities in Indonesia. With this application one can know the time schedule contained prayers throughout the cities in Indonesia and can be reminded directly with the call to prayer when the prayer time has come, perhaps in haste to pray without disrupting work on one activity. Data storage performed on the Microsoft Access database, while data processing and the processing is done by programs created with Visual Basic 6.0. This application can be run on a computer that is running the operating system Windows-based.
