Abstract:
Media information is a means to convey a beruta or information that we received, both orally and in writing, and various kinds such as newspapers, television, radio and computers.
Internet is one medium of information very quickly. Certainly much needed information is information that is very fast, accurate, and reliable authenticity.
Student Representative Body (BPM) is one of the student information center and aspirations STMIK STI & K. Jakarta For the implementation can be used server side scripting programming language PHP (Personal Home Page) for information on the site can be accessed through the Internet and take advantage of MySQL software so that the contents of this site more interesting and dynamic.
With the expected student BPM website STMIK Jakarta STI & K can get information and channel their aspirations.
